Training needs when Bioinformatics meets Systems Biology.

Lightning Talk
Natalie Stanford
Systems Biology data is not quite the same as Bioinformatics data.

- Bioinformatics data from e.g. ArrayExpress.
- Model specific experimental data.
- Processes for “filling in the gaps”

Data use in modeling
We can offer training so that data can be stored and annotated using accessible formats, controlled standards, and controlled ontologies.
Pan-European training strategy involves identifying centres of excellence and best practice, and also the developed standards.
